

Autonomous AI Agents

Technology Forecasting

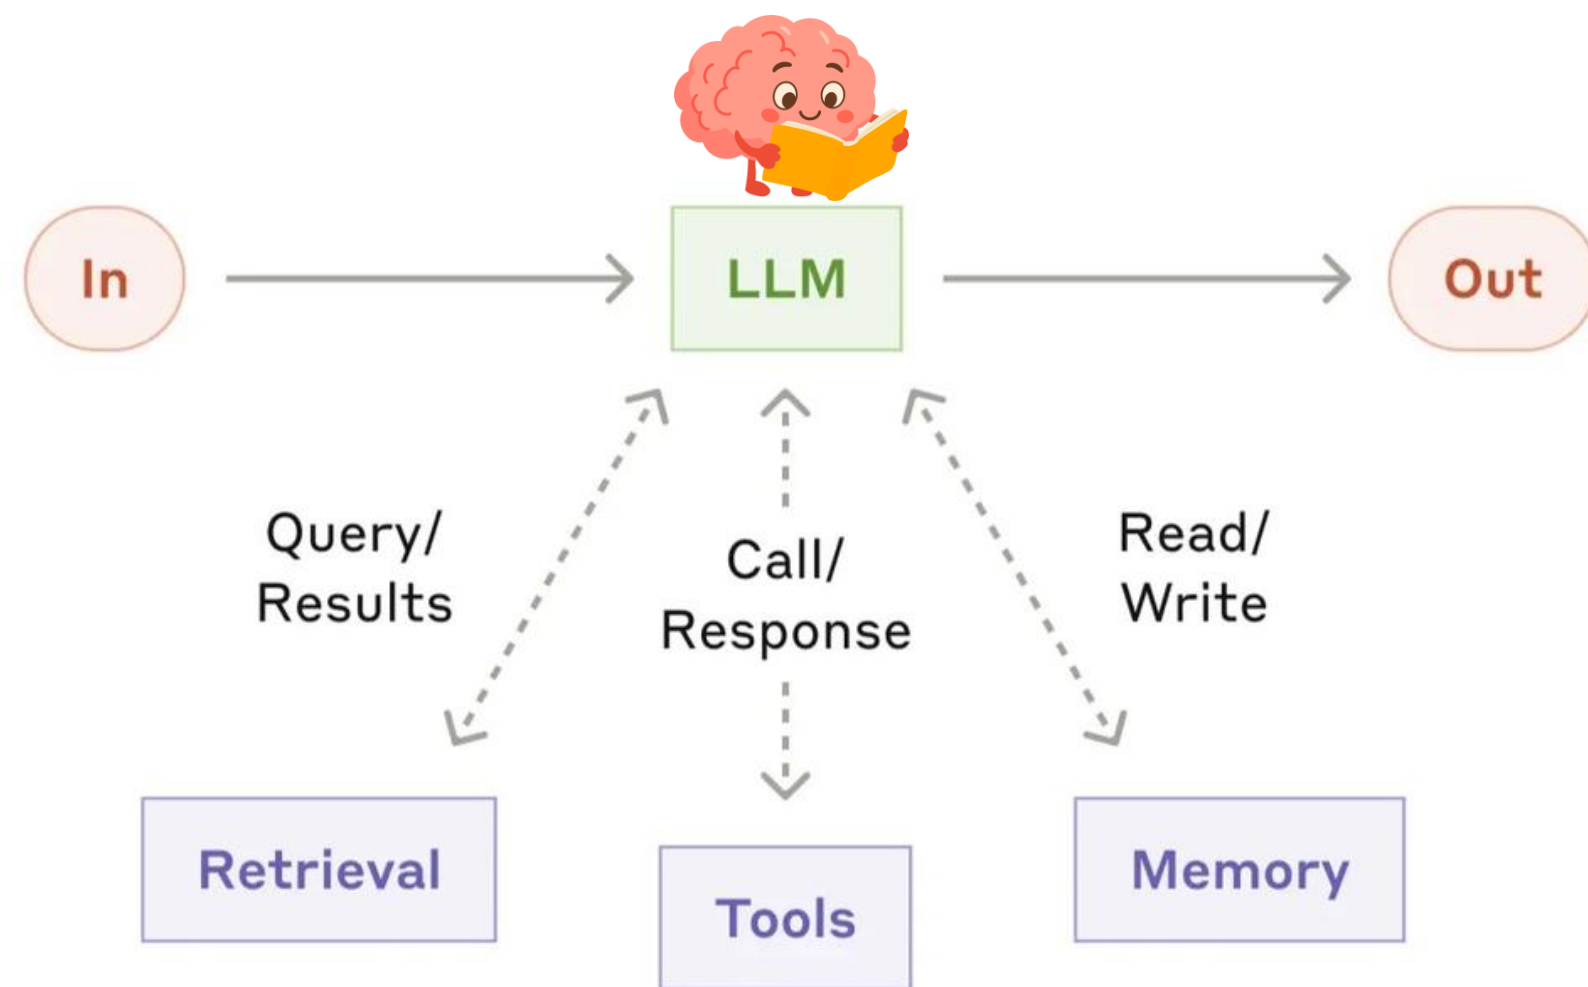

30 Oct 2025

What are AI Agents?

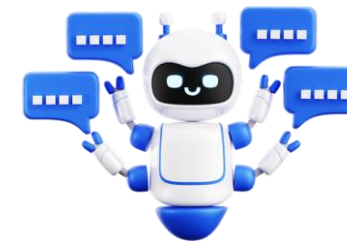

An AI system that can **independently pursue goals** with **adaptive** reasoning and action over time

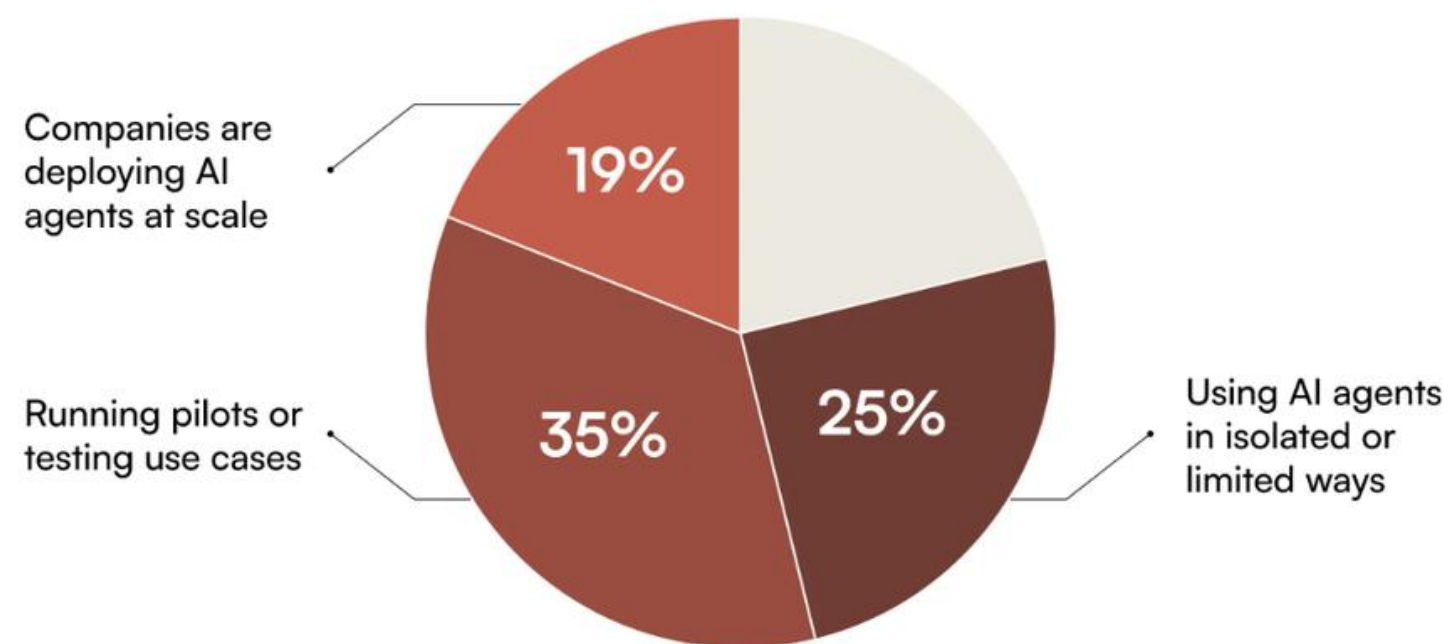

Source: Claude

- Independent → Zero Human Intervention
- Pursue Goals → Broad Objectives, Not just Tasks
- Adaptive → Continuous learning

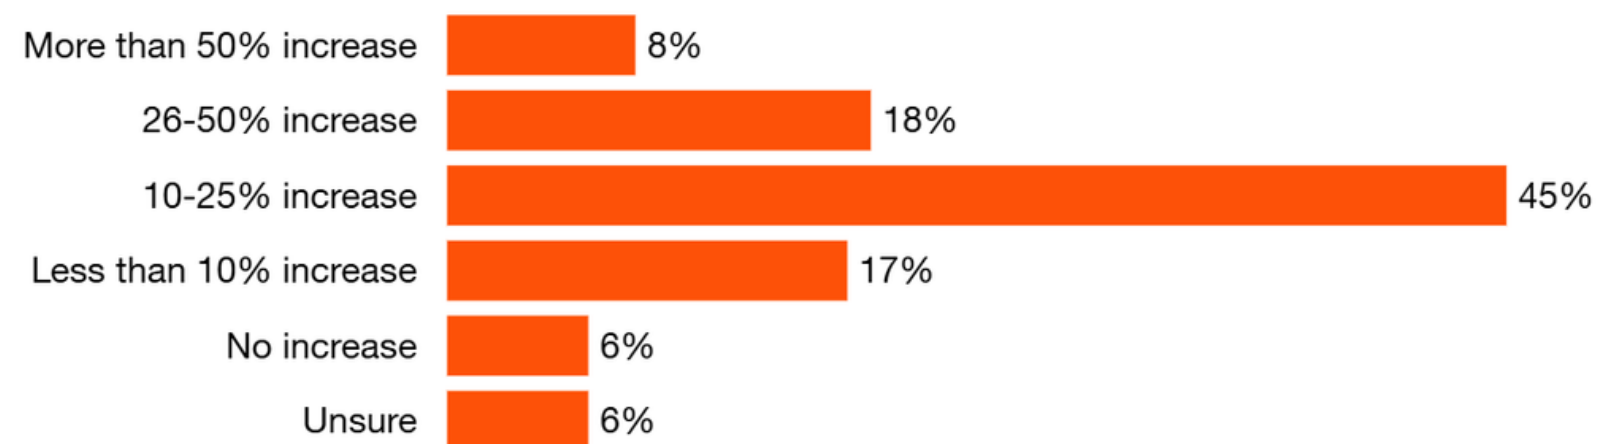

Examples: Meeting Agent, Weather Agent, Shopping Agent.. endless possibilities

Adoption is rising

AI budget increases due to agentic AI

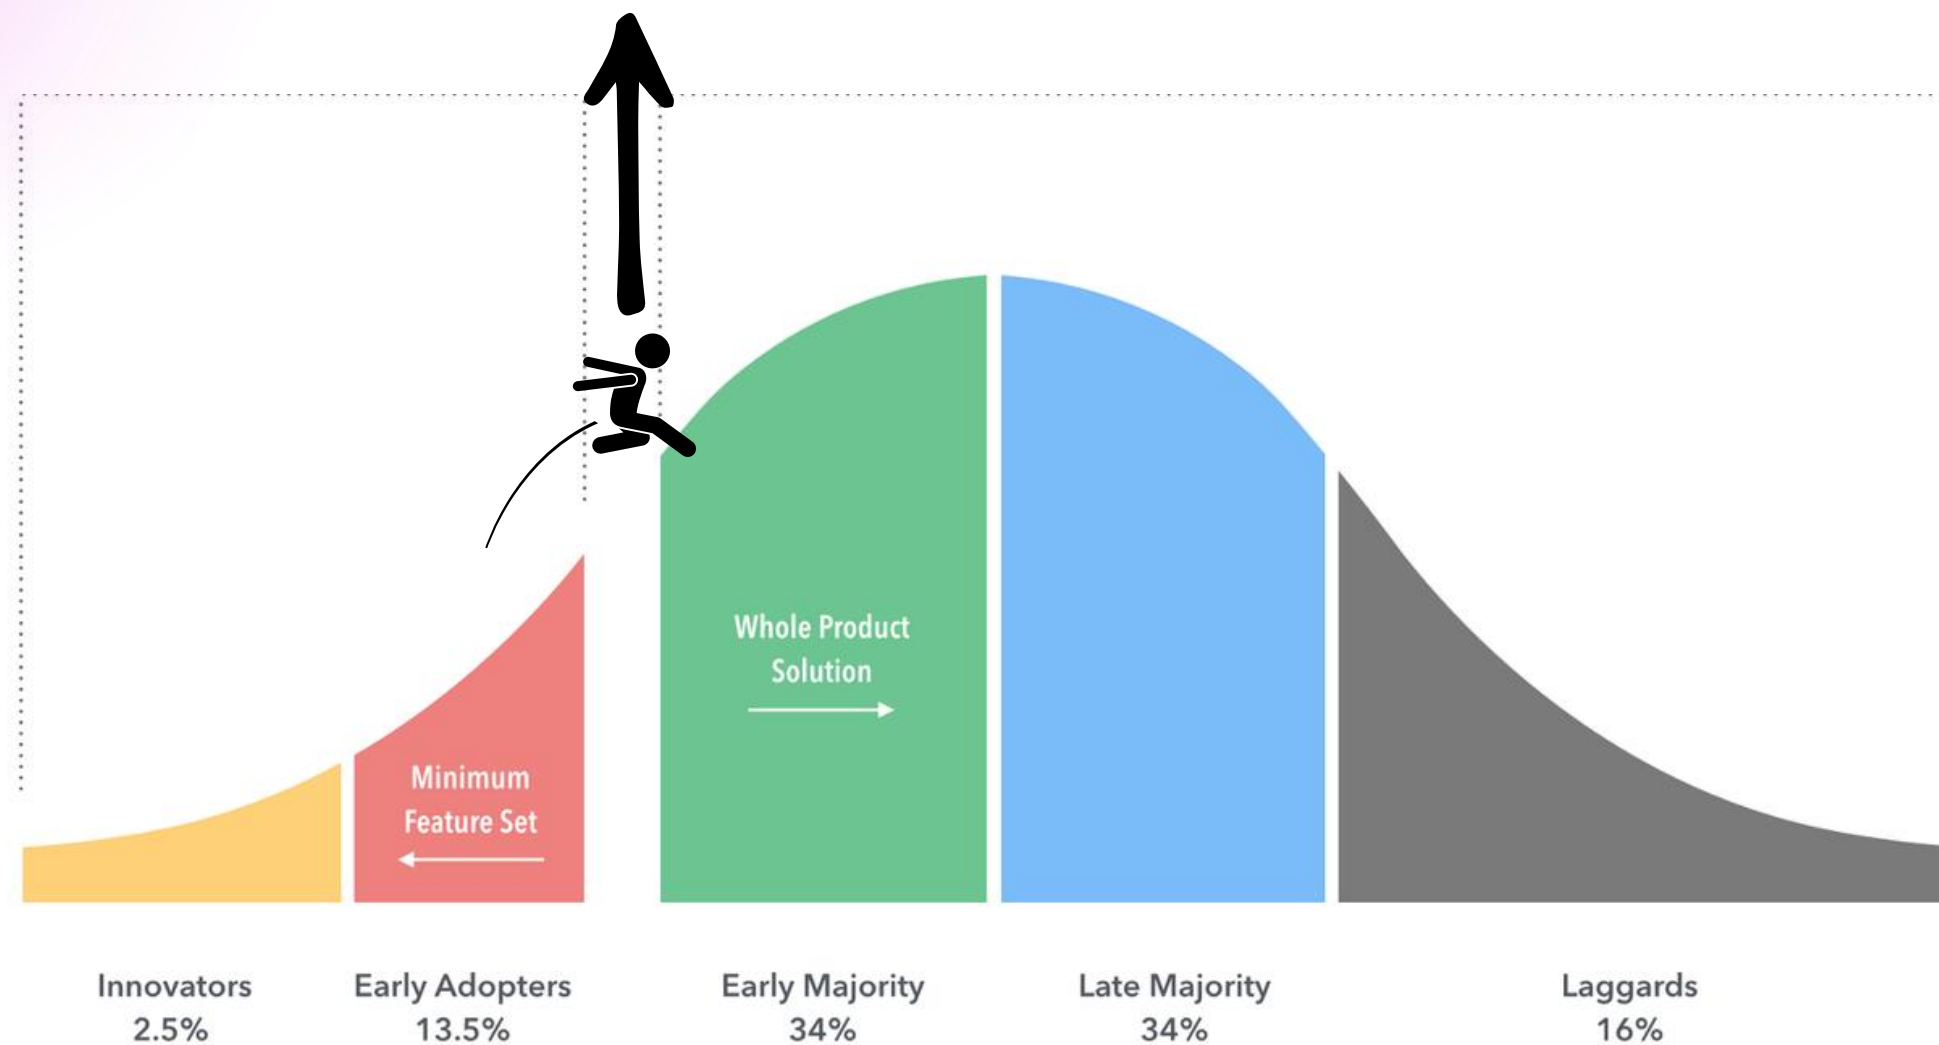

Key Players

Roger's Model

AI Agents are here
(2024 ->> 2025)

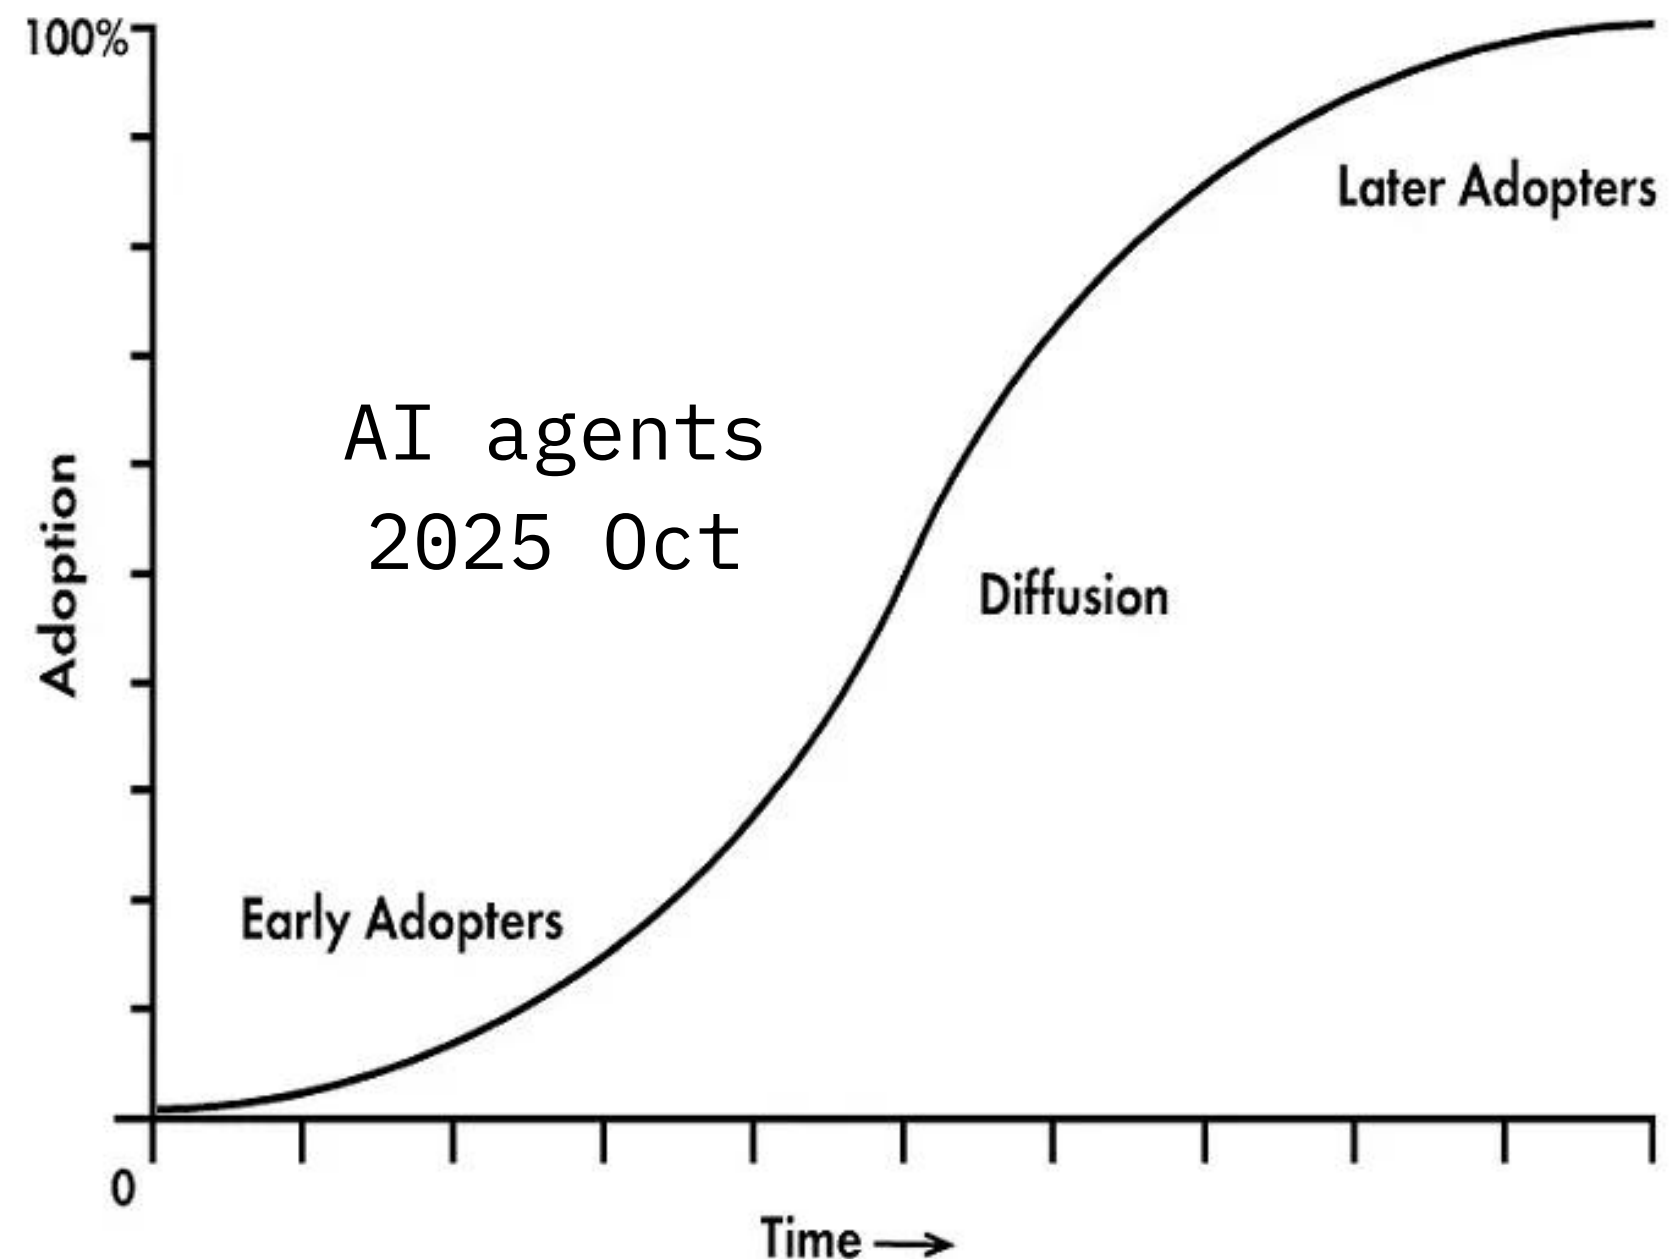

- Currently crossing Moore's chasm – moving from early adopters to the early majority stage
- Expectation - Full Adoption by Early Majority - mid 2026
- Roger's Model changes for B2C vs B2B

Factors affecting this adoption: cost, cybersecurity, skills, trust

Diffusion Adoption Model

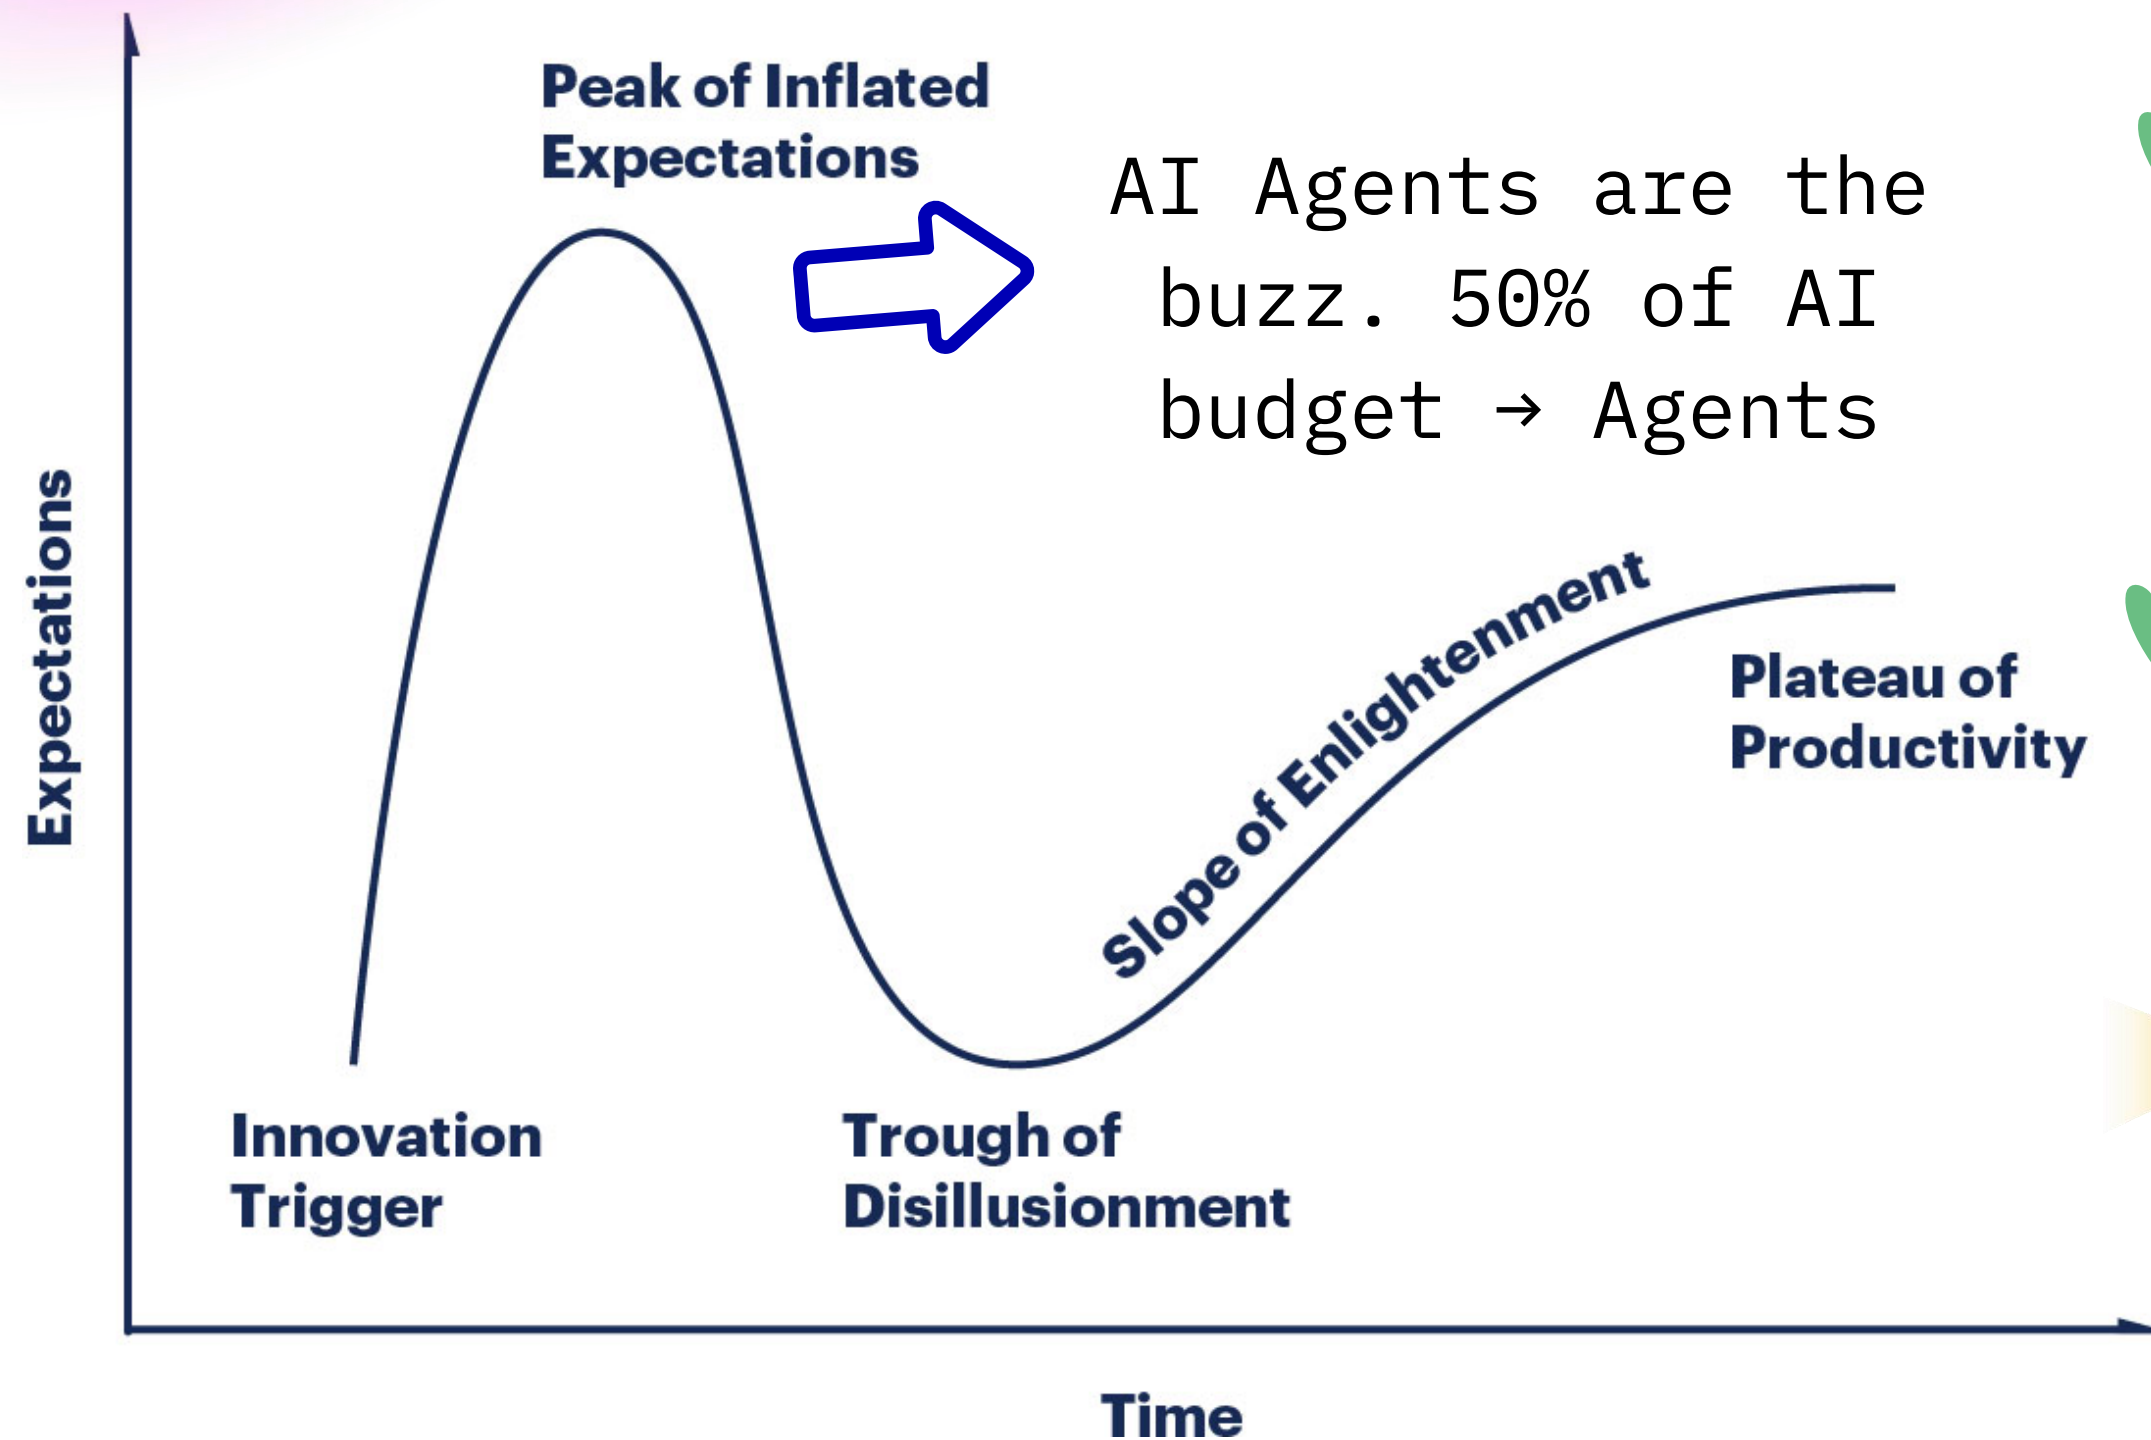

- **Early adopters** are driving end-to-end usage
- Entering **diffusion** phase with LLMs becoming better
- Next phase: organizational adoption
- Adoption speed is increasing every month due to investments and research in compute

AI Agents are moving from early innovation to real-world adoption - the era of diffusion is in 2026

Gartner Hype Cycle

AI Agents are the buzz. 50% of AI budget → Agents

Rapid hype and heavy investment surged since early 2025

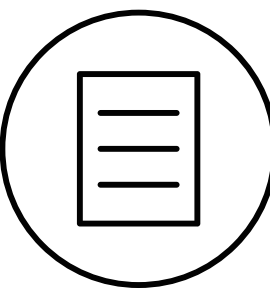

Companies and startups are racing to integrate or build around autonomous agents to unlock growth

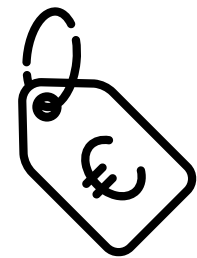

Problems are arising with tech and infrastructure limitations

Anderson's Laws

Critical Price

AI agents are
still
expensive

Commodity

will become
commoditized
over time

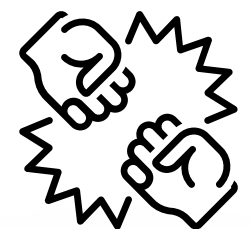

Critical Mass

Yet to achieve
critical mass but
on route

Displacement

Traditional
search, systems,
get replaced

Who buys AI Agents in Finance & What they Sign for

Urgent Pains

Agent Play

KPI They'll sign for

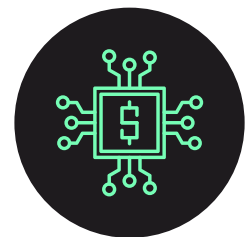

Banks

Rising cost per contact,
dispute queues, AML/KYC
backlogs and issues

Support Copilot,
KYC/AML triage Agent

AHT ↓ 25–40%, False
positives (AML) ↓ 20–
40%, SLA adherence
≥99%

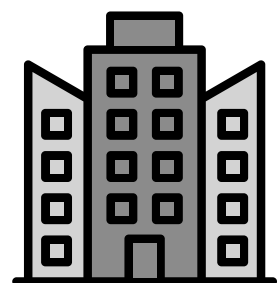

Fintech

Fraud ops, onboarding
drop-off, need to scale
CX

In-app concierge,
Risk op Copilot,
onboarding
assistant

Time-to-decision ↓ 50–
80%, Activation/finish
rate ↑ 5–10pp

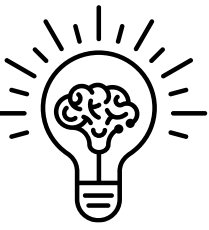

Large Firms

Slow research,
manual reporting,
policy lookup & caos

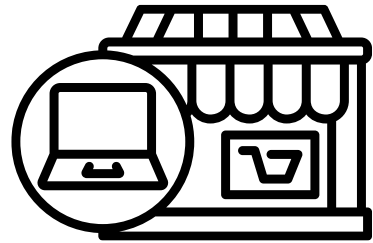

Research &
briefing agent,
Memo generator,
Policy Q&A

Time-to-proposal
↓ 60–90%, Analyst
hours saved 30–
50%, Reporting
cycle time ↓ 50–
70%,

How to Make Money with Agents - New Business Models

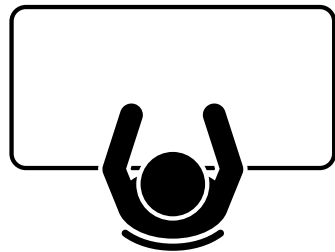

Monetization Models

- Subscription (per user)
- Pay per task
- Setup + monthly service
- Success fee or Share of Savings

1-person Company

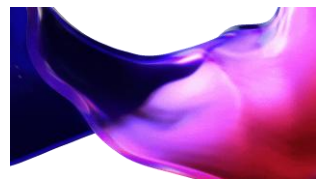

- Workflow: Find leads - Research the client - Produce and send
- Your “team” of agents: Lead-Finder, researcher, writer, coder
- Controls: Agent approval before anything is sent / created
- Measure: Hours saved, tasks finished without edits, quality improved

Can we improve current business models?

Automation with Scale

Boost operational efficiency, reduce workload and bottlenecks. Example: Walmart using agents for inventory management

Diversification

Companies launch new products driven by agents. Example: Google launching Agents SDK, Vertex AI Agent Builders

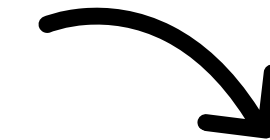

Innovation

Create new IPs, patents, R&D developments. Eg: Cancer treatments, drug discovery, Google Deepmind's AlphaFold

Who can help AI agents win?

AI Researchers

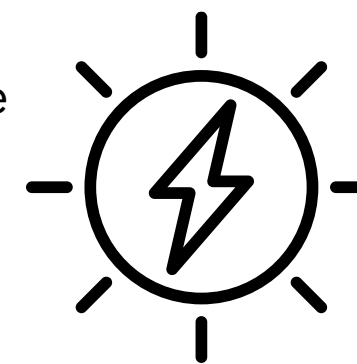

Policy and
Regulatory
Bodies

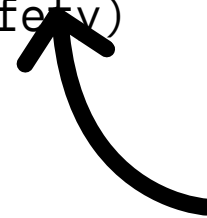

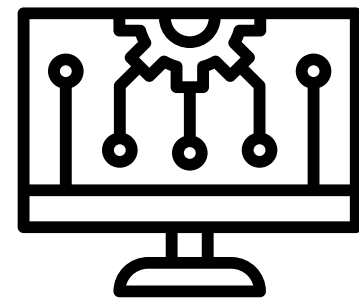

(Ensure responsible
adoption)

Energy
Providers
(Enable large-scale
compute operations)

Compute
Infrastructure
Providers
(Deliver GPUs, chips & data
centers)

Frontier Model
Developers
(Advance model architecture &
safety)

Risks that need to be addressed

Data Privacy and Security

Data exposure and controls to protect user and company info. Particularly PII and healthcare data

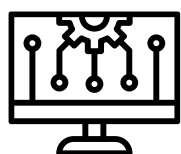

Hallucinations and Trust

Agent is actually smart working as expected not generating fake output. Eg: Deloitte's recent fraud in Australia

Solving real problems is still key

Some companies adopt AI just to boost investor confidence. Eg: Klarna jumping the gun with AI customer service

Legacy Systems

Companies like banks and manufacturers still rely on legacy systems that need upgrades

Data: Garbage in Garbage Out

High quality data collection is a must. Context setting is a deal breaker

Human Skill

Employees need to be upskilled to deal with agents adoption
